

Incepta Range

Feature rich configurations offering endless customization options, specialist components, broad range of chassis and peripherals, built to order in the UK

I N C E P T A

Viglen Personal Computers are
manufactured by XMA in the UK

Designed for dedicated roles

The Incepta range of Personal Computers is focussed at addressing niche areas with specific user requirements. Incepta steps away from the mainstream Genie range and Viglen's stable image platform by allowing for even greater customisation and personalisation, whilst maintaining the same high level of quality control and compatibility testing to ensure solid, reliable configurations for dedicated roles.

Specialist components

The Incepta range offers a wide range of specialist components, including the latest gaming and workstation motherboards from Intel, high performance VGA adapters to cover a variety of different usage scenarios, and all-in-one water coolers to keep high-end CPUs sufficiently cooled throughout the duration of use.

A board choice of chassis are available, offering varying form factors, feature-sets and personalisation options to suit a range of different requirements. All cases are put through rigorous tests to ensure they can cope with the high temperature output of modern CPUs, and additional chassis cooling options are also available to ensure all high performance components remain sufficiently cooled.

Outstanding performance

Supreme performance is at the heart of the Incepta range, boasting a board choice of components and accessories to tailor-make the perfect solution for a dedicate role. You can choose from a broad choice of high-end Intel processors, including the latest "k" series and Extreme series models which enable overclocking features, and a range of fine-tuned, high performance graphics adapters with pre-overclocked settings and support for multi-GPU technologies to achieve the very best graphics performance throughput.

Endless flexibility

Virtually limitless customisation and personalisation is available with the Incepta range. Whether it's a one-off requirement or an ongoing configuration, Incepta is focused at providing a flexible and versatile product range to ensure it can be customised to fulfil any dedicated role. With options for LED lighting strips, modular power supplies, and cases with clear side panels, the Incepta range offers a level of personalisation like no other.

Traditional Viglen values

Viglen is a UK company, with heritage of delivering IT solutions into a wide range of public sector and commercial organisations in the UK. Unlike the lumbering international suppliers who take a 'jack-of-all trades' approach, Viglen maintains a flexible edge by focussing on specific markets.

Whilst the Incepta range provides a level of customisation beyond the mainstream Genie range, it maintains all traditional Viglen principles and value add services to ensure it remains relevant and coherent to the Viglen product range.

Specification

- **Motherboard**
Choice of specialist motherboards
- **Operating System**
Windows® 10
- **Processor**
Intel® Core™ i3, i5, i7, i9
Intel "k" and "X" series CPU support*
AMD Ryzen 3, 5, 7 and Threadripper
- **Memory**
Up to 128GB DDR4
- **Hard Drive**
Range of SATA 6Gbit/sec mechanical and solid state hard drives
Choice of M.2 solid state storage drives*
- **Audio**
Realtek, Intel HD or SupremeFX audio*
- **Network**
Realtek or Intel® Gigabit Ethernet*
- **Graphics**
Integrated Intel® HD video with PCIe expansion options
AMD Quad-GPU CrossFireX Technology*
NVIDIA Quad-GPU SLI Technology*
- **Expansion**
PCI Express x16 and x1 or x4*
M.2 PCI Express*
- **Optical Drive**
Internal DVD-ROM or DVD Writer**
- **Input**
105-key USB keyboard and optical mouse with optional upgrades
- **Certification**
Energy Star 6.1
- **Security**
Optional Security cables and chassis marking available.

* depends on motherboard choice
** depends on chassis choice
