

Building better connections

Every day, millions of businesses depend on solid network connections to deliver results for their colleagues, clients and customers. With bandwidth and speed demands ever climbing, it's important they have the tech they need to keep up.

So, don't just settle for an off-the-shelf solution from a consumer provider. No matter the size of your business, you could benefit from a bespoke, made to measure option that takes into account your environment and your needs.

SAY HI TO EXA NETWORKS

For almost 20 years, Exa Networks has been providing UK businesses with the networking solutions they need to succeed.

From consultation through to installation and beyond, Exa aims to go above and beyond, in order to provide every member of staff the level of performance required, regardless of industry, location or business size.

Why choose Exa?

There are some significant advantages available to any business that chooses a networking solution from Exa. Here's how they deliver a fast, secure and reliable connection.

FAST

With some office workers losing around 30 minutes a day to slow connections, fast internet isn't just a nice to have thing for gaming, it's essential for a business' performance.

With Exa Networks, you can enjoy guaranteed speeds of up to 10Gbps, giving you the speed and bandwidth you need at work, day after day. That's not just a download speed figure either, you can also upload faster than ever before.

SECURE

The quantity and impact of cyber attacks on UK businesses is on the rise, so be sure to take your data and network security seriously.

By using in-house solutions like FortiGate and SurfProtect, Exa Networks offers industry-leading protection, in a way that is flexible and customisable. You can even choose to have your routers fully managed by Exa for life, in order to ensure they're always up to date and safe.

RELIABLE

There's no point in having fast internet which drops out all the time. In fact, downtime costs UK businesses billions every year.

Eliminate the frustration with a carefully considered network which removes deadspots and delivers consistent performance, with a network uptime of over 99.99%. Many networks are even uncontended, or heavily overprovisioned, to ensure data continues to flow at peak times.

Support at every step

Your business is unique, and you should be treated as such. Don't just settle for an off-the-shelf package and no support – get the right setup for you, and the assistance you deserve.

BUILD BESPOKE NETWORKS

Whether you're spread across multiple buildings, or one large space, your network requirements should be bespoke. Exa Networks will work to find the best solution for you, one that'll work for years to come.

REDUCE YOUR DATA BURDEN

Keeping track of your network can be hard work without the right support. Exa offers colocation services to help you manage your data, and prevent any catastrophic loss while keeping you in full control.

THE SUPPORT YOU NEED

Alongside your XMA Account Manager, you'll have access to Exa Networks' award-winning team of technical engineers, and customer service managers. They'll be on hand seven days a week to answer your questions, assist your management decisions and make sure you're always well looked after.

What does XMA offer you?

XMA has a long history of helping businesses, large and small, to find the perfect tech solution for them. Wherever you work, whatever you work on, we're here to support your hunt for ideal tech solutions.

But we do more than just make the sale and move on. Our team is there to help at every stage. From helping you identify what your ideal solution looks like, to being on the end of the phone after the system is up and running, whenever you need us, we'll be there.

So, whether you need to refine your network and infrastructure, or provide new devices to your at-home employees, send us a message, and we'll find the right solution together.
