

Evolve the higher education experience

WITH XMA AND ARUBA

xceed.

As higher education campuses become busy, bustling and exciting places again, it's time to take a look at how to make them better than ever.

Whether that means creating more flexible experiences for students, or enhancing the security of everyone involved, XMA and Aruba can help.

Here's how.

INTRODUCING ARUBA ESP

Education's first AI-powered network has arrived, designed to help students, teachers and staff to connect securely, efficiently and from anywhere. Using automated network management, edge-to-cloud security, and predictive AI-powered insights, it provides a stronger basis for the future of higher education to build on.

GO HYBRID

With students now expecting to be able to work from home or the campus, networks need to be up to the job. Aruba ESP helps higher education to create a stable, easily accessible network that allows users on and off site to get to what they need, without stability or performance issues. You can even see exactly where the network is being used, so you can adjust it accordingly.

STAY SAFE

Through the use of advanced zero-trust security protocols and enhanced visibility tools, it's simpler than ever for campus staff to keep a network safe, as Aruba ESP will handle most of it automatically. If something does occur, it's easier to spot where the breach happened, so you can take steps to counter it.

AUTOMATE MANAGEMENT

Any university will tell you, a network issue is an enormous headache, and can cause learning to grind to a halt. Aruba ESP is capable of pre-emptively identifying issues and taking steps to resolve them, meaning you needn't know there was ever an issue. With over 1.5 billion data points for Aruba ESP to manage, it's always on top of what's going on.

READY TO ACCOMMODATE THE NEW NORMAL?

Only a flexible education model can meet the needs of a mobile-first generation. But creating those hybrid learning environments can highlight IT challenges. With Aruba simplifying network operations in the cloud, unified infrastructure does the heavy lifting for you. So, you can deliver a friction-free, campus-like experience, anywhere.

WHY XMA?

When it comes to technology for education, XMA knows that there is no one-size-fits-all solution. That's why we'll work with you to find the ideal option for you, and you alone.

Our long-term relationships with major brands like Aruba ensure we have the tech you need to excel, now and for years to come.

ENJOY THE BENEFITS OF JISC

XMA is an approved supplier on the Jisc National Equipment Framework Agreement (jaNET) for the supply and support of network equipment. The framework is open to higher education institutions, further education and specialist colleges and research council establishments in the UK. It can also be used by any other organisations connected to the Janet Network, including local authorities, regional broadband consortia, or other bodies whose core purpose is the support or advancement of further or higher education or of research. Rest assured through this compliant route to purchase, we can help you keep your campus connected with Aruba.
