

Advisory Service | Central Government

Introduction

The transition to Windows 11 is a critical step in the modernisation of public services. It provides the foundation for stronger security, improved productivity, and the flexible work environments required by government departments.

A successful migration can be a catalyst for organisational change. However, without a structured, compliant plan, it can introduce significant operational risk and disruption to essential services.

Forward-thinking government departments are already preparing for the future by:

- Delivering value-for-money through strategic asset management.
- Aligning with NCSC guidance and Zero Trust principles.
- Ensuring public servants are equipped to deliver modern, efficient services.

Our Windows 11 Advisory service is designed to guide your department through the critical decisions that shape a compliant, secure, and successful transition.

Talk to our Consultants about...

Device

Our SMART Device Refresh service provides actionable insights to deliver value-for-money across your device estate. By balancing performance, user requirements, and cost-efficiency, we help you extend device lifecycles, reduce capital expenditure, and make smarter, data-driven refresh decisions that align with public sector budget cycles.

Security

Avoid the unforeseen expenditure and security risks of Windows 10 Extended Security Updates (ESU). Our security consultations help you optimise your technology investment by applying Zero Trust security principles, strengthening your department against emerging cyber threats and ensuring alignment with standards like Cyber Essentials Plus and PSN compliance requirements.

Applications

We help you optimise your application lifecycle to lower ongoing operational expenses and ensure compliance with government cybersecurity standards. Our service is designed to mitigate software compatibility issues that can hinder operating system upgrades and create security vulnerabilities.

DMaaS

Our DMaaS offering is a fully managed solution designed to reduce the burden of asset management on your internal IT teams. This service helps to lower operational expenses, provide greater transparency for accountability, and enhance service quality for all users.

Adoption

To realise the full value of your investment, public servants must be equipped to use the new tools effectively. We help your department adopt the latest Windows 11 features to improve productivity, foster inclusive communication, and boost collaboration within the hybrid work models common across central government.

Highlights

- > **Simplify:**
Migration strategy grounded in data and insight.
- > **Enable:**
Navigate complexity with expert-led planning.
- > **Enhance:**
Application security and lifecycle.
- > **Empower:**
Employee experience with adoption
