Advisory Service | Small to Medium Businesses

Introduction

Upgrading to Windows 11 is a necessary step to keep your business data secure and your staff productive. For a business owner, any major IT change can be a worry. Without a clear plan, the move can cause disruption, create unexpected costs, and take up your valuable time.

We help businesses like yours successfully upgrade by focusing on what matters:

- Getting the most from your IT budget with smart device purchasing.
- Protecting your business data from common cyber threats like ransomware.
- Making sure your team can work productively without frustrating IT issues.

Our Windows 11 Advisory service gives you a straightforward plan to upgrade, removing the headache of IT so you can focus on running your business.

Talk to our Consultants about...

Device

Our SMART Device Refresh service helps you get the best value for your money. We'll advise on the right computers for your needs – powerful enough to get the job done, but affordable enough to fit your budget. This helps you avoid overspending and extends the life of your equipment.

Security

Continuing to use Windows 10 after its end of support date (14th October 2025) introduces security risks and can lead to unforeseen expenses. We help you leverage Microsoft Security Features, helping to protect your business from the common threats that target SMBs.

Applications

A major worry is whether your essential business software will work after an upgrade. We can ensure that your critical or legacy applications, like accounting or CRM software, don't hinder your migration to Windows 11.

DMaaS

Our Device Management as a Service (DMaaS) provides an all-in-one IT support solution for a predictable monthly cost. We handle all the day-to-day IT management, security, and support, taking technology problems off your plate so you can focus on growing your business.

Adoption

A new operating system is only useful if your team can use it without disruption. When staff are struggling to find files or use new features, it slows down the entire business and leads to frustration. Our job isn't finished after the OS Upgrade. We provide practical support to make the transition smooth for your entire team.

Highlights

> **Simplify:**
> Migration strategy grounded in data and insight.

> **Enable:**
> Navigate complexity with expert-led planning.

> **Enhance:**
> Application security and lifecycle.

> **Empower:**
> Employee experience with adoption
