# The results are in

How Lenovo and AMD help forensics  
move fast from evidence to conviction

# You need backup

Today's digital forensics teams are under mounting pressure. Investigations are increasing in complexity while the skills required to tackle them are in short supply.

The rapid advancement of technology in nearly all aspects of our daily lives means almost two-thirds of crimes now have a digital element, drastically increasing the workload on already overstretched teams.

Officer workloads have increased by over 32% per constable since 2015

With a proven track record helping police forces protect the public, Lenovo, advanced by AMD Ryzen™ PRO and EPYC™ processors, is there for you when the stakes are high and resources are low.

In just two years, we've already joined forces with 25% police offices in the UK.

# Case closed: Lenovo and AMD power rapid digital forensics

A leader in digital investigations, Blue Lights Digital has decades of experience assisting private businesses, law enforcement and intelligence agencies with their digital operations.

We worked in partnership with them to investigate the performance and efficiency benefits of using Lenovo ThinkStation workstations, advanced by AMD Ryzen™ Threadripper™ PRO processors and AMD Smart Technologies, for digital forensics. The results leave no room for reasonable doubt.

Lenovo workstations with AMD Ryzen™ Threadripper™ PRO processors drive efficiency across the board

Forensic Capture	Efficiency gain
iPhone 12 Cellebrite PA	21%
Android Poco Cellebrite PA	6%
Android Poco Hancm	25%
iPhone 12 Hancm	42%
Windows FTK	9%
Mac OSX ADF	28%
Windows Griffeye	38%
Mac OSX ADF	635
Windows Griffeye	125

Above data provided by Blue Lights Digital

# Strong evidence of a brighter future

**We know the speed you receive information can be the difference between cold case and case closed. That's why we're committed to working with police forces across the UK to make sure you've got the technology you need from first response to final verdict.**

## **We get face time with the force**

In recent years, we've met directly with officers and leading digital forensics experts at police stations across the country. We take the time to understand how our solutions help them every day and highlight any issues or challenges that need to be addressed.

For many, this is the first time a vendor has met with them in person.

[\*\*Download the Thinkstation P8 data sheet>>>\*\*](#)

## **Levelling up law enforcement**

Based on these discussions, we've worked hard to develop the ThinkStation P8, advanced by AMD Ryzen™ Threadripper™ PRO processors. Our blazingly fast next generation workstation offers improved performance and reliability to help you solve more crimes and potentially stop criminals in their tracks.

And with AMD EPYC™ processors, forces can build secure, scalable server infrastructure for evidence storage and analysis, ensuring interoperability across the UK's 43 police forces.

# Ready to join forces?

Get in touch with Lenovo today to find out how we, together with AMD, can be there for backup – whenever you need us.
